

CONFORMITY CERTIFICATE

ROLLED ZINC AND FINISHED PRODUCTS

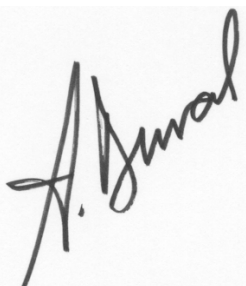

Umicore Building Products undertakes to supply the Czech and Slovak markets with rolled zinc in coils and sheets and finished products made out of them having properties, notably appearance, chemical composition, dimensional tolerances and mechanical qualities, which conform to the standard EN 988 and to the PREMIUM-ZINC label.

VM ZINC® offers a higher quality level and has created a PREMIUMZINC label, making sure the certification of products over and beyond European Standard EN 988.

The PREMIUMZINC label demands stricter specifications for some measurements, particularly flatness, chemical composition and the following mechanical properties : bend tests at 4°C and Erichsen test (deep drawing).

Umicore France S.A.S., Building Product Unit, is certified ISO 9001, version 2000 for its four French sites guaranteeing conception, production and sales for all VM ZINC® products, as well as ISO 14 001 for its three production sites for environment.

This certificate is valid for all deliveries during 2007.
